

Summer Influenza Summary:

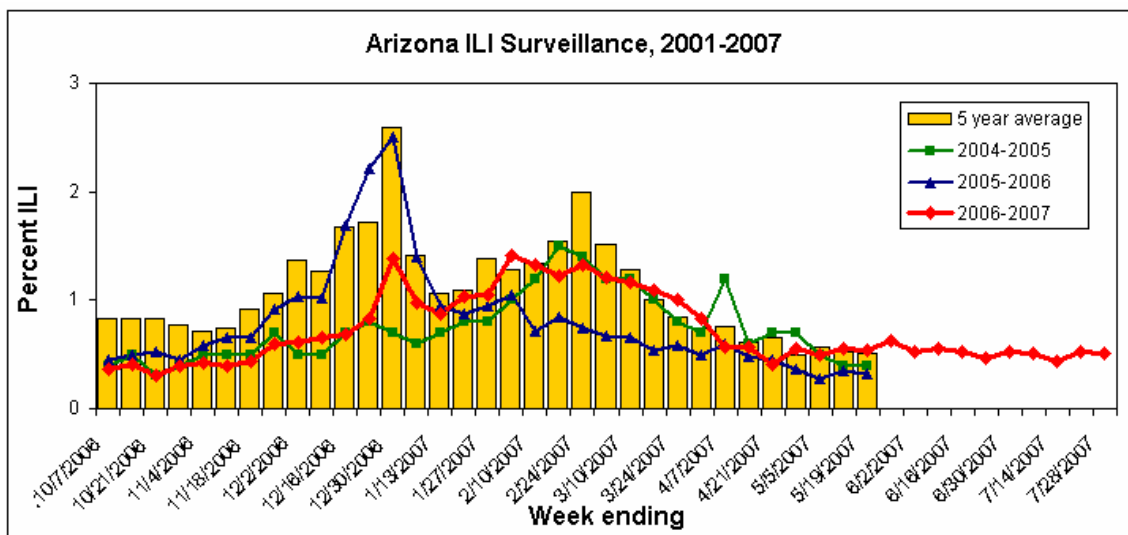

No new cases of influenza were reported for Arizona during the month of July (Weeks 27-30).

Data in this report are provisional and may change as more reports are received.

Influenza-Like Illness (ILI) Surveillance from Sentinel Providers

The proportion of patient visits to sentinel providers for ILI in the state averaged 0.5% for the month of July (Weeks 27-30). This value is at the Arizona ILI baseline.

ILI is defined as a fever of at least 100°F plus either a cough or a sore throat.

RSV Activity in Arizona:

Two RSV cases were reported for Arizona during the month of July (Weeks 27-30) but both cases were originally diagnosed in June.
